ICML
INSTITUTE FOR COMMUNICATION MANAGEMENT AND LEADERSHIP

PROJECT MANAGEMENT

Agile Project Management

Plan and deliver projects using agile principles and practices.

WHO IT'S FOR

Project teams, managers and stakeholders who work with agile delivery.

DURATION

1 day, or tailored to your needs

FORMAT

On-site: we come to you, virtual or hybrid.

PARTICIPANTS WILL DEVELOP THE SKILLS TO

- Explain agile and how it differs from traditional delivery
- Work in agile roles and team practices
- Plan and estimate work in short delivery cycles
- Develop and manage requirements as they change
- Apply core agile practices and techniques to real work
- Collaborate across the team, business and customers

ABOUT THIS PROGRAM

When requirements shift halfway through, a fixed plan breaks and teams spend more time reworking than delivering. Our agile project management training shows participants how to plan and deliver in short cycles, keep work visible and adapt as priorities change. Teams practise agile roles, planning and estimation, and the core practices on real work from your organisation, so they understand how agile differs from traditional delivery and can use it with confidence.

Tailored to your organisation

Teams new to agile start with the mindset and core practices. Teams already using agile review what they do now and focus on embedding what works. We build in your tools, terminology and the projects your teams deliver.

> "Fantastic refresher for any who have done PM training and a great intro for those who haven't. The techniques learnt can be used across many departments.
>
